The Nicodom FTIR spectra of toxic and hazardous compounds were collected using the FTIR Spectrometer Nexus 670™ (Thermo) and the Miracle™ single bounce ATR accessory (Pike Technologies) equipped by Diamond, ZnSe, or Si crystals.

The Nicodom spectral library of polymers features resolution of 4cm⁻¹ in the spectral range 600-4000 cm⁻¹, measurement time 1 minute, the instrument was purged by dried air.

The complete information is available in the full library version (not available in the demo list of compounds)

The last library update has been done 2011, the Nicodom IR Libraries include many new substances which came to market during the last decade.

This FTIR spectra library is available as digital searchable library compatible with your spectroscopic software. Also it can be delivered with SEARCH software or in *.pdf format.

To download the list of spectra, to download a free demo library compatible with your software, to check the format compatibility as well as for pricelist, ordering info and information about all NICODOM IR/NIR Libraries and other NICODOM products please visit our webpage.
