

NICODOM IR Suspect Powders

The infrared spectral library „NICODOM IR Suspect Powders“ has been designed for on-site identification of unknown suspect powders by portable infrared detectors. Also it can be used in connection with IR spectrometers in forensic laboratories.

The library „NICODOM IR Suspect Powders“ contains 1015 infrared spectra of harmless, suspect and hazardous powders and will classify an unknown powder as harmless, suspect or hazardous*.

Examples of compound types:

Harmless – easily accessible powders e.g. related to food, washing and cleaning, cosmetics, building...

Suspect – chemicals and biochemicals, powdered polymers...

Hazardous – explosives, drugs, pesticides, poisons...

The spectra were collected using the FTIR Spectrometer Nexus 670™ (Thermo) and the Miracle™ single bounce ATR accessory (Pike Technologies) equipped by ZnSe or Si crystal.

The spectral library features resolution of 4cm⁻¹ in the spectral range 600-4000 cm⁻¹, measurement time 1 minute.

Typical information about the sample contains:

Name: Strychnine Nitrate

CAS: 66-32-0

Formula: C₂₁H₂₃N₃O₅

Type: Poison

Classification: Hazardous

Name: Trinitrotoluene (TNT)

CAS: 118-96-7

Formula: C₇H₅N₃O₆

Type: Explosive

Classification: Hazardous

Name: Ariel

Manufacturer: Procter&Gamble

Type: Washing Powder

Note: 30-90C, universal, not for wool and silk

Classification: Harmless

This library is available as digital searchable library compatible with your spectroscopic software. Also it can be delivered with SEARCH software or in *.pdf format.

To download the list of spectra from this library, to download the free Nicodom Demo Library (50 spectra) compatible with your software, to check the format compatibility as well as for pricelist, ordering info and information about all NICODOM IR/NIR Libraries and other NICODOM products please visit our webpage.

* - for similarity match < 100% the classification must be confirmed by visual comparison of the spectra and by other analytical methods
